AI-Driven Cognitive Load & Workforce Performance Estimator

Report Generated: 2025-12-07 00:27 | Report ID: NHR-202512070027

EMPLOYEE INFORMATION

Name: Abhay Kumar Das	Age: 21 years
Role Level: C-Level	Department: Engineering
Project Phase: Deployment	Employee Persona: Workaholic

INPUT PARAMETERS

Parameter	Value	Range
Weekly Work Hours	72 hrs	20-100 hrs
Overtime (30 days)	65 hrs	0-120 hrs
Active Tasks	40	1-50
Stress Level	4.5/5	1-5
Performance Rating	3.5/5	1-5
Wellbeing Score	40/100	0-100

ANALYSIS RESULTS

CLI Score	Risk Level	Burnout Prob.	Perf. Impact
0.492	Medium	36.0%	-1.795

Employee Profile Classification: High Workload & Stress

HR RECOMMENDATION

Action: Do Not Assign New Tasks

Details: Critical burnout risk. Reduce workload immediately.

CLI RISK SCALE REFERENCE

Low (0.00-0.30)	Balanced, can handle more responsibility
Medium (0.30-0.55)	Moderate stress, monitor closely
High (0.55-0.75)	Fatigue signs, support needed
Critical (0.75-1.00)	Burnout risk, immediate action

CLI (Cognitive Load Index) is a measure of mental workload stress (0-1). It is calculated using workload hours, stress levels, task frequency, sentiment, overtime, and other behavioral indicators. Burnout Probability estimates the likelihood of burnout based on CLI threshold (sigmoid function centered at 0.55).
